IN THE SPECIFICATION

Please amend paragraph [0078] at page 23 of the application as follows:

[0078] An example of a polymeric material storage media comprises an injection molded filtered polymeric material substrate that may optionally comprise a hollow (bubbles, cavity, and the like) or filler (metal, plastics, glass, ceramic, etc., in various forms such as fibers, spheres, etc.) core. Disposed on the substrate are various layers including: a data layer, dielectric layer(s), a reflective layer, and/or a protective layer. These layers comprise conventional materials and are disposed in accordance with the type of media produced. For example, for a first surface media, the layers may be protective layer, dielectric layer, data storage layer, dielectric layer, and then the reflective layer disposed in contact with the substrate. A preferred data storage media that may be prepared from the polymeric material described herein is disclosed in Application Serial No. 10/648,609, ~~docket no. 120801~~ entitled "Substrate and storage media for data prepared therefrom~~STORAGE MEDIUM FOR DATA WITH IMPROVED DIMENSIONAL STABILITY~~" filed August 26, 2003, published U.S. Application 2005-0048252 A1 and copending with the present application.
